BA Made from bio naphtha produced from organic raw materials (e.G., Vegetable oils)

CA Made from circular raw materials (r-oil or oil from chemical recycling)

BCA Made from bio naphtha produced from organic and circular raw materials (e.G., Waste fats)

Balance® is Versalis' family of **ISCC PLUS certified products**, that guarantee identical **performance, quality and properties**, as they do not differ in chemical composition and physical-mechanical performance from standard products.

ISCC PLUS certification has been obtained including the voluntary Add-on "GHG Emissions", which allows calculating and disclosing GHG emissions to clients for each Balance® grade, following a cradle-to-gate approach. The calculation of GHG savings considers:

- for Balance® BA and BCA products, the CO_2 absorbed by the vegetable feedstock during the growth, through the calculation of the quantity of biogenic carbon allocated to the product;
- for Balance® CA products, the GHG emissions avoided by substituting the incineration of not-mechanically recyclable plastic wastes with chemical recycling.
