

Made from bio naphtha produced from organic raw materials (e.G., Vegetable oils)

Made from bio naphtha produced from organic and circular raw materials (e.G., Waste fats)

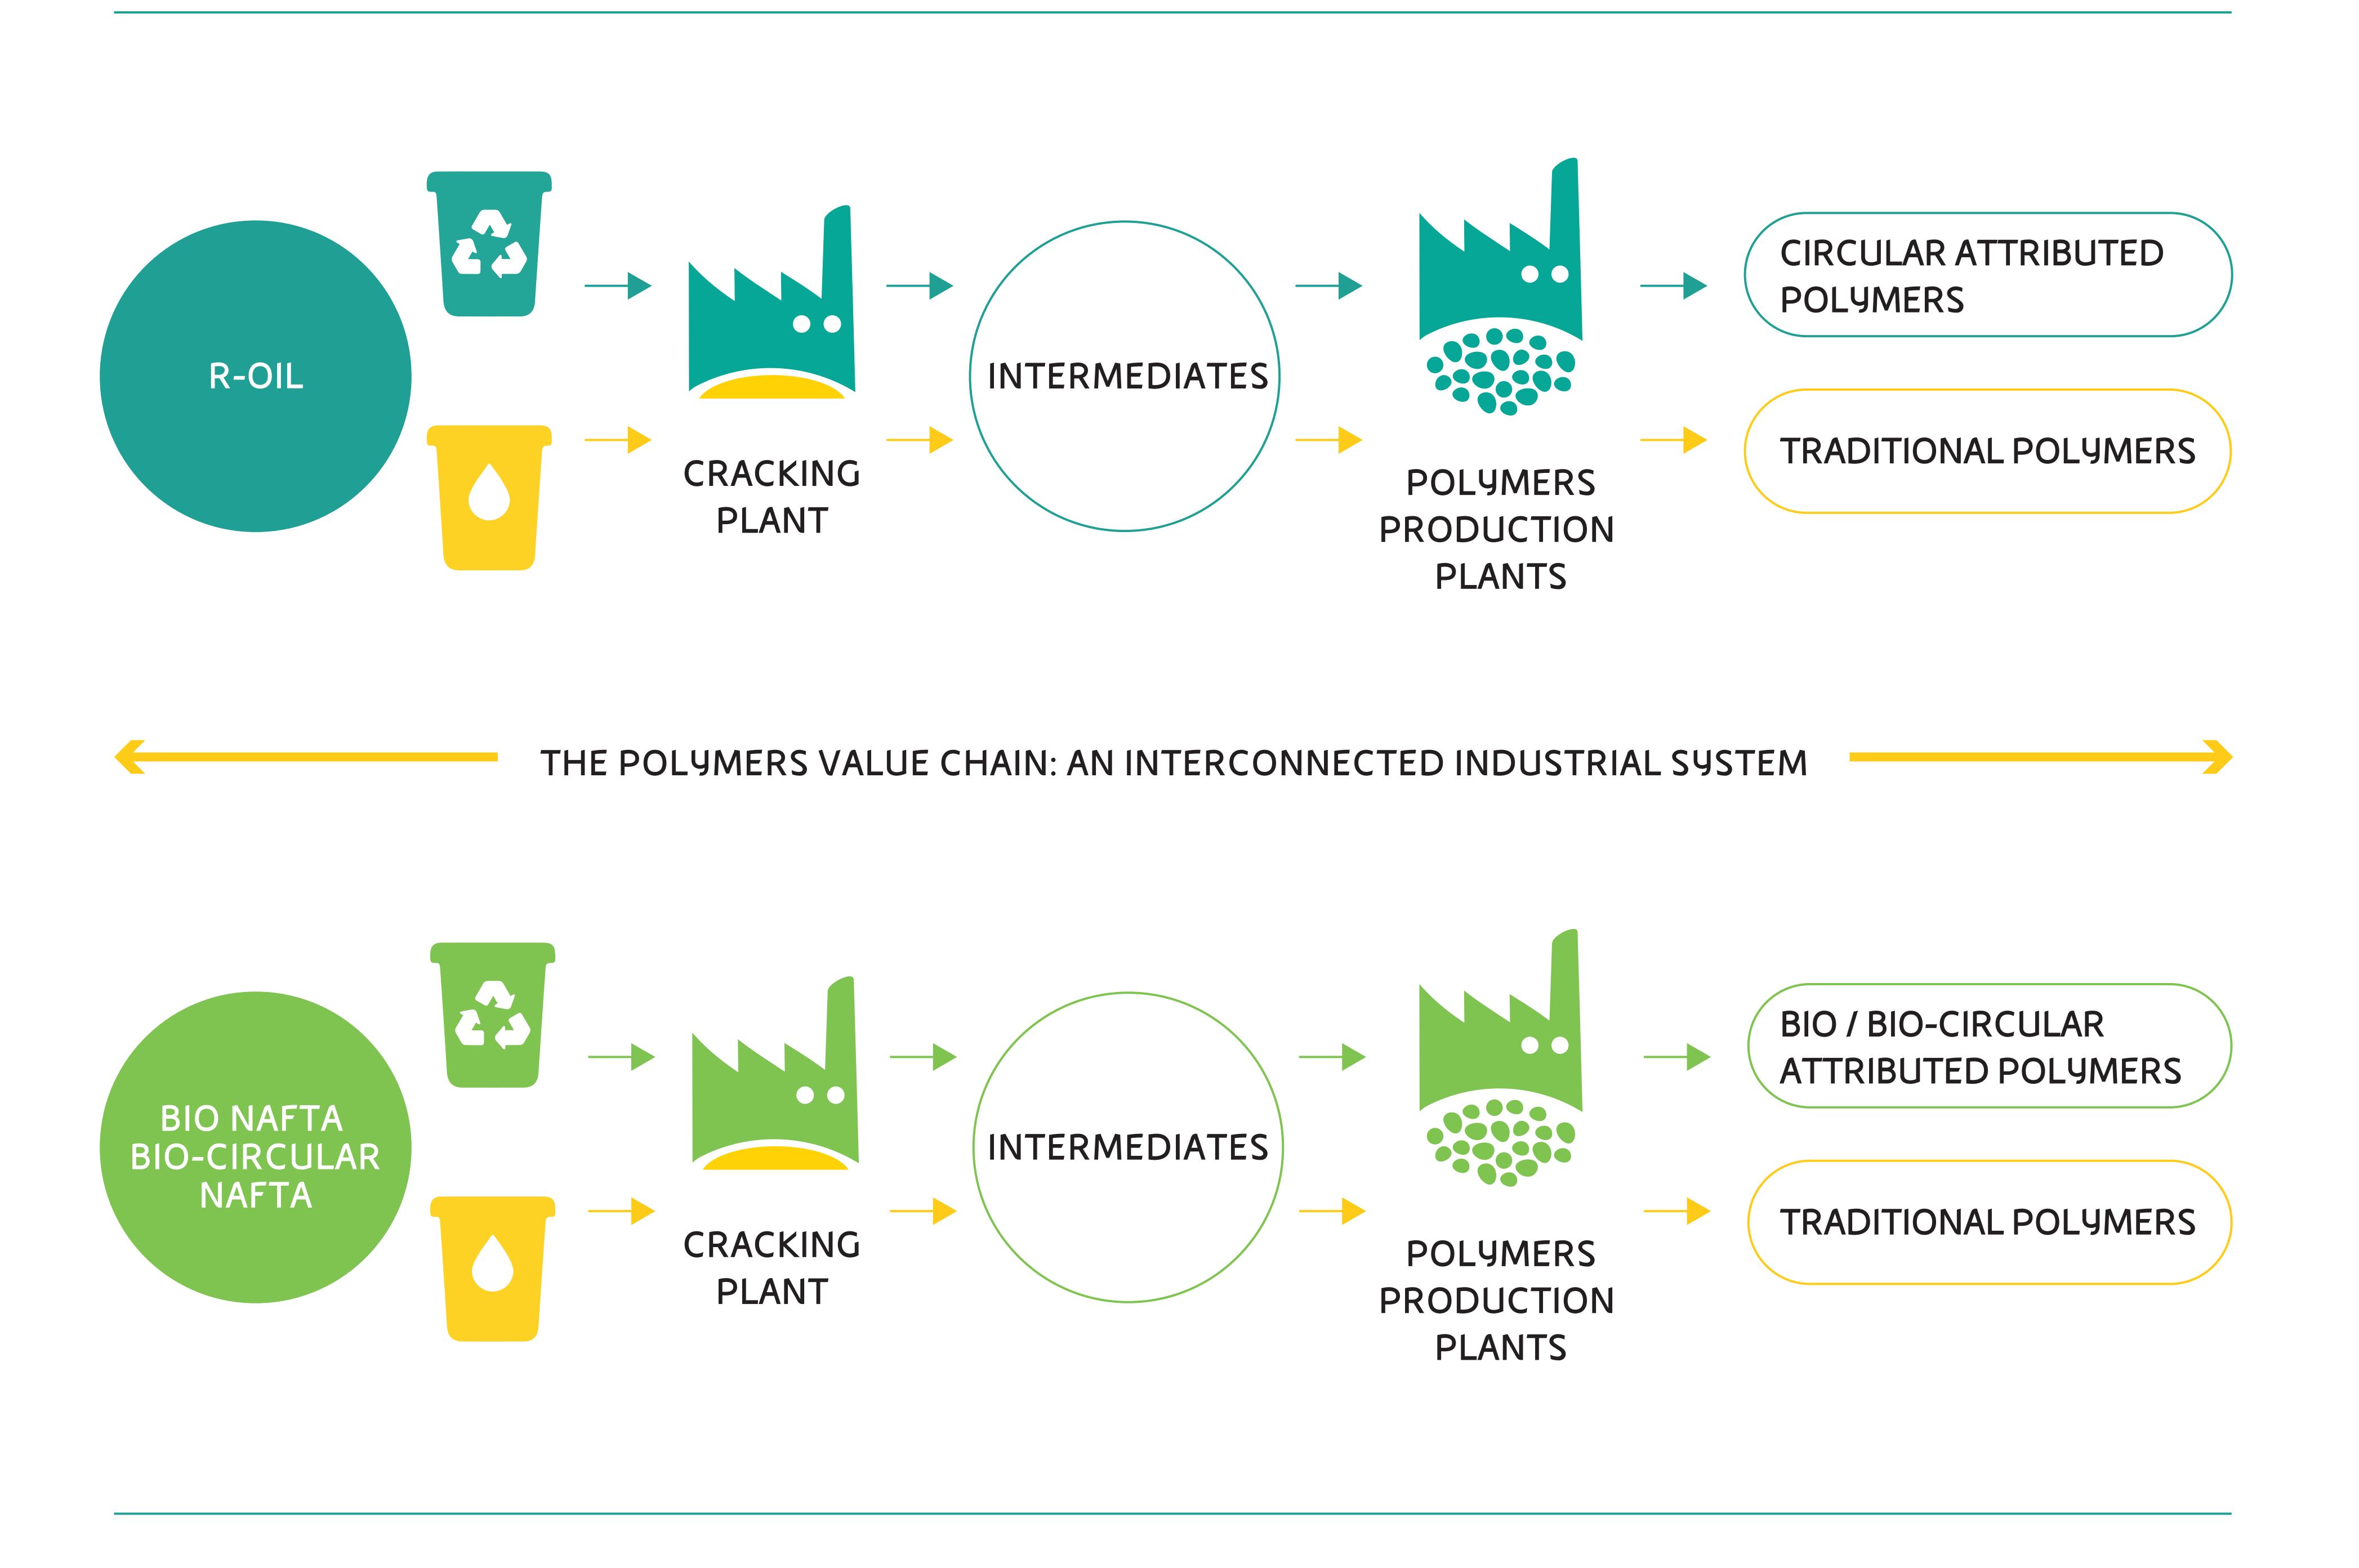

CA

Made from circular raw materials (r-oil or oil from chemical recycling)

Balance® is Versalis' family of ISCC PLUS certified products, the range of "Bio Attributed (BA)" and "Bio-Circular Attributed (BCA)" products made from bio naphtha, and "Circular Attributed (CA)" made with a "recycled oil" (r-Oil), a pyrolysis oil obtained from the chemical recycling process of mixed plastic waste. BA, BCA and CA products guarantee identical performance, quality and properties, as they do not differ in chemical composition and physical-mechanical performance from standard products.

ISCC PLUS is a component of the ISCC certification scheme (International Sustainability & Carbon Certification), which is voluntary and allows companies throughout the supply chain to monitor and be able to demonstrate the sustainability of their products through the supervision of sustainability, traceability and mass balance requirements.

Elastomers' Balance® portfolio includes
HCIS BR, LCIS BR, ESBR, SSBR, LATEX SB and CBX families.
All grades in portfolio are available in BA, BCA and CA version.
