Sustainable feedstock: mass balance approach

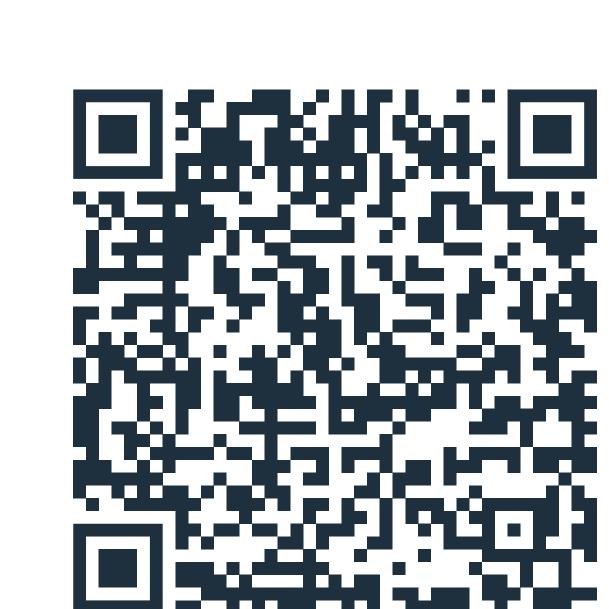

A recognized methodology to attribute to the final product the sustainable feedstock content

Able to trace a flow of materials with a certain characteristic, along the value chain

correspondence
between the sustainable
component of the raw
material fed together
with the traditional one,
in a complex system
and a property of the
output product

This floor is called "Gaia" and it is produced by Artigo with more sustainable raw materials: our Europrene® E-SBR 1502 BA, part of the Balance® family.
