Operation Clean Sweep (OCS)

Voluntary participation in the Operation Clean Sweep® (OCS) programme since 2015, promoting the implementation and sharing of best practices across the plastics value chain. The Mantua, Ferrara and Ravenna sites achieved OCS certification in 2024, followed by the Dunkirk site in 2025.

Value of our people

* Total Recordable
Injuries/Worked Hour
(Employees + Contractors).

Local area and community schemes

Versalis promotes the development of solid and durable relationships with its areas of operation, by means of tangible initiatives designed to generate and unlock the potential for local synergism.

Among the initiatives carried out in 2025 were:

- the partnership between Novamont and Terra Felix which promotes the social reintegration of inmates;
- renewed support for services assisting women affected by gender-based violence in Ravenna.

Sustainability in the value chain

EcoVadis CSR Rating

The fact that Versalis joined the EcoVadis platform back in 2016 is evidence of a firm, ongoing commitment to promote sustainability principles and standards and reflects a clear desire to build lasting, value creating relationships focusing on progressive growth and continuous improvement. Indeed, joining EcoVadis is a dynamic process, made even more challenging by increasingly tighter assessment criteria to match the growing global concern for sustainability.

Novamont is also a member of the EcoVadis platform, thus consolidating the group’s concern for sustainability issues and promoting the increasingly widespread dissemination of ESG principles.

Open-es

Versalis, Novamont and Finproject are actively involved in Open-es. That scheme brings together more than 30 partners including large industrial businesses, financial institutions and associations. It is designed to assist companies with measuring and improving their ESG performance and more than 40,000 businesses have joined, including around 2,200 Versalis suppliers.
